

Suggestions for a great e-poster

- Do not include more than 5 slides, including title slide
- Your presentation title should be the same as your abstract title
- Use a white or solid-colored background template for slides
- Clearly label figures and don't make them too small
- Try not to read straight from your slides during the presentation
- Try to limit your use of text, a lot of text can be distracting to an audience who should be focused on listening to you speak
- Time yourself giving your presentation— you should be able to finish in ~7 minutes, leaving 2-3 minutes for questions (you will be stopped if you go past the time limit of 10 minutes)
- The example slides are simply a reference! You can change them up however you like, just make sure to use a clear header for each slide.
- Email conference@amwa-student.org with any questions!
- The next 5 slides are the example for scientific research, and the 5 slides after that are the example for clinical cases. Do not include the grayed out text at the top right in your presentation (it's just a reference!).

Title of Presentation (please use
same title used on your abstract
submission)
