The Honorable Tim Kaine
U.S. Senate
231 Russell Senate Office Building
Washington, D.C. 20510

Dear Senators Collins, Cortez Masto, Capito and Kaine:

Thank you for your leadership on the important public health challenges facing our nation, particularly the urgent issue of Americans living with Alzheimer's disease and other forms of dementia, including vascular disease, Lewy body dementia, and frontotemporal degeneration. We are pleased to support the bipartisan Building Our Largest Dementia (BOLD) Infrastructure for Alzheimer's Act (S. 2076ⁱ/H.R.4256ⁱⁱ), which would create a public health infrastructure across the country to implement effective interventions focused on dementia public health issues such as increasing early detection and diagnosis, reducing risk and preventing avoidable hospitalizations.

There are few more compelling or complex issues to confront our aging society, now and over the coming decades, than Alzheimer's disease and other forms of dementia. These neurodegenerative conditions impose enormous costs to our nation's health, prosperity, and social fabric, costs that are skyrocketing.ⁱⁱⁱ Based on the National Institute on Aging's Health and Retirement Study (HRS), we know that the health system costs of caring for people with dementia in the United States are comparable to, and perhaps greater than, those for heart disease and cancer. A recent analysis of HRS data revealed that average per-person health care spending in the last five years of life for people with dementia was more than a \$250,000 -- 57 percent greater than costs associated with death from other diseases such as including cancer and heart disease.^{iv}

Today, more than 5.5 million Americans are living with dementia at an annual cost to our economy exceeding \$259 billion.^v Alzheimer's disease contributes to the deaths of

approximately 500,000 Americans each year, and it is the only leading cause of death in the United States for which there is no proven means of prevention, disease modification or cure.^{vi} Hispanics are about 1.5 times more likely to develop Alzheimer's disease than whites, and African Americans are about two times more likely.^{vii} In a 2011 study, 13.8% of older Asian Americans and Pacific Islander Americans reported an increase in confusion or memory loss, which was the second highest of all ethnic groups.^{viii} Additionally, researchers have recently estimated that American Indians and Alaska Natives have a 35% lifetime risk of developing dementia.^{ix} Former Surgeon General and director of the Centers for Disease Control and Prevention (CDC) Dr. David Satcher recently said, "Alzheimer's is the most under-recognized threat to public health in the 21st century." Today, another person develops the disease every 66 seconds; by 2050, someone in the United States will develop the disease every 33 seconds. This explosive growth will cause Alzheimer's costs to increase from an estimated \$259 billion in 2017 to \$1.1 trillion in 2050 (in 2017 dollars).^x These mounting costs threaten to bankrupt families, businesses and our health care system.

Public health plays an essential role in protecting the health and well-being of all Americans, including promoting cognitive function and reducing the risk of cognitive decline. Investing in a nationwide public health response to Alzheimer's disease and other forms of dementia would drive population-level change, achieve a higher quality of life for those living with dementia and their caregivers, and reduce associated public and private costs. The BOLD Infrastructure for Alzheimer's Act would provide this crucial investment by establishing centers of excellence across the country and funding state, local and tribal public health departments to increase early detection and diagnosis, reduce risk, prevent avoidable hospitalizations, mitigate health disparities, address the needs of caregivers and support care planning for people living with Alzheimer's disease and other forms of dementia. These important public health actions allow affected individuals to live in their homes longer and delay costly institutionalized care.

The BOLD Infrastructure for Alzheimer's Act would increase the collection, analysis and timely reporting of data critically important to identifying opportunities for public health interventions, helping stakeholders track progress in the public health response, and enabling state and federal policymakers to make informed decisions when developing plans and policies. Comprehensive, disaggregated data collection on Alzheimer's disease and other forms of dementia is essential to better understand the impact of dementia on older Americans, their family members and caregivers – and would strengthen stakeholders' ability to address dementia-related health disparities among communities of color, American Indian and Alaska Native communities, LGBT communities, and people with intellectual and developmental disabilities. Finally, the bill would strengthen nationwide implementation of the CDC's Public Health Road Map, which includes strategic action items for state and local public health departments and their partners to promote cognitive functioning, address cognitive impairment and help meet the needs of care partners.^{xi}

The BOLD Infrastructure for Alzheimer's Act is consistent with the CDC mission, the HHS strategic plan, and the National Alzheimer's Plan goals. The Act would capitalize

on recent updates to the Medicare Physician Fee Schedule that encourage dementia diagnosis and care planning, the “National Research Summit on Care, Services, and Supports for Persons with Dementia and Their Caregivers”^{xii} hosted by NIH last October, and the CMS “Behavioral Health Payment and Care Delivery Innovation Summit”^{xiii} held last September. Finally, the Act complements important ongoing work being done through the Administration on Community Living’s Alzheimer’s Disease Supportive Services Programs and the Alzheimer’s Disease Initiative.

Thank you for considering our views and for your leadership to overcome Alzheimer’s disease and other forms of dementia. We look forward to working with you to enact and implement this essential bipartisan legislation. For any questions or additional information about this legislation or other policy issues, please contact Ian Kremer, executive director of Leaders Engaged on Alzheimer’s Disease (the LEAD Coalition),^{xiv} ikremer@leadcoalition.org or (571) 383-9916.
